expecting to see these on Kaito soon

1/ @linera_io - \$12M

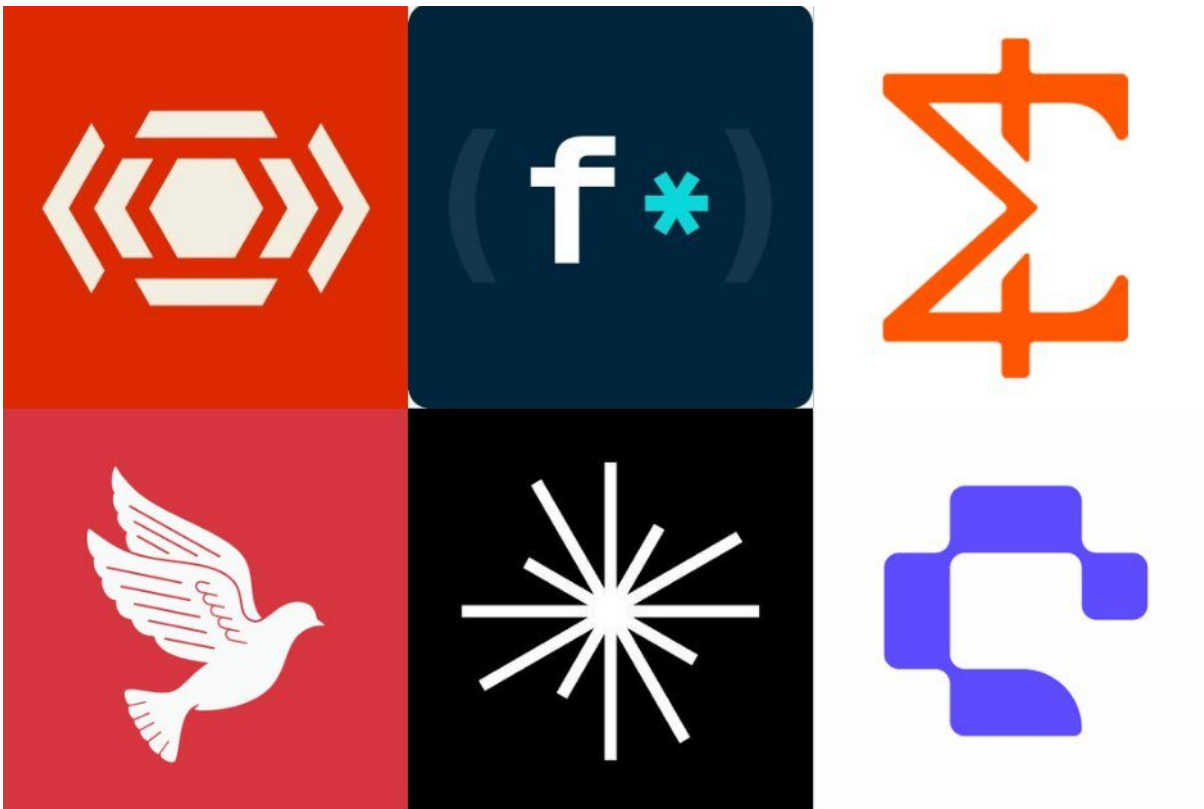

L1 built on microchains.

every user runs their own lightweight chain.

no mempool. sub-second finality.

a16z + Borderless backed.

#InfoFi #kaito <https://t.co/ZJFkPFAAdNW>

2/ @fhenix - \$22M

fully homomorphic encryption on ethereum.

compute on encrypted data without ever decrypting it.

ZK proves. FHE computes privately.

3/ @0xMiden - \$25M

spun out from polygon. now independent.

execution happens on your device not the sequencer.

private-by-default. ZK-powered.

4/ @thru_xyz - \$14.4M

high-perf L1.

ThruVM runs fully on RISC-V.

write in C, C++, or Rust no custom language.

Framework + Electric Capital led.

Firedancer / Solana talent on the team.

5/ @axisrobotics - \$12M

data engine for physical AI.

train robots from your browser via simulation.

no hardware needed.

Hack VC led.

6/ @BitRobotNetwork - \$8M

subnet network for embodied AI on solana.

robots + compute + researchers in one place.

DePIN but for real-world robotics.
